

WHY CHOOSE BLANCCO MANAGEMENT CONSOLE FOR LINUX?

Blanco Management Console for Linux is a unique centralised solution designed to handle data erasure software distribution, hardware asset management and erasure reporting within the WAN/LAN. It is a complete online managed service for operating, managing and following up on the erasure process. Blanco Management console for Linux is the perfect solution when operating with large volumes of IT assets.

- Requires minimum effort in report distribution to different customers.
- Comprehensive erasure reports are stored in a database which can be located either at the customer site or outsourced to Blanco.
- All the critical actions can be controlled via an Internet Browser.
- Compatible with all Blanco data erasure software.

KEY FEATURES

- Offers unprecedented flexibility to manage the erasure process and reporting.
- Enables the administrator to distribute the software and grant user rights & licenses to operators who will perform the secure erasure and send the reports to the database.
- Comprehensive reports can be browsed, imported, exported, deleted or modified by different users depending on the user rights, which have been assigned to them by the administrator.
