

## WHY CHOOSE BLANCCO MANAGEMENT CONSOLE FOR WINDOWS?

Blanco Management Console for Windows provides an 'in-house' solution for PC, laptop and server management within the LAN. The user manages all erasure tasks and reporting without FDD or CD-Rom, via direct network erasure. Blanco Management console for Windows combines data erasure and automatically performed hardware asset inventory within centralised custom databases.

- All gathered information is available for browsing and printing over the LAN.
- Reports are available for integration and exporting to other databases via the network.
- Capability to use Active Directory user management for authenticating the user.
- Compatibility with every Blanco erasure product, customized to your requirements.

## KEY FEATURES

- Offers unprecedented flexibility to manage the erasure process and reporting.
- Enables the administrator to distribute the software and grant user rights & licenses to operators who will perform the secure erasure and send the reports to the database.
- Comprehensive reports can be browsed, imported, exported, deleted or modified by different users depending on the user rights, which have been assigned to them by the administrator.
