

Blanco Stealth will prevent data recovery from lost or stolen personal computer or when unauthorised access is attempted. There are a variety of preventative in life uses; ideal for laptops used in the field or for desktops PCs in transit.

KEY FEATURES

- Well hidden in the Operating System therefore extremely difficult to detect. Blanco Stealth starts automatically in the background without the unauthorised user's knowledge giving the impression that the OS is being loaded.
- Flexible user control. The safe guard tools in the software can be programmed to activate on a variety of parameters: wrong password, specific date or after a certain number of boot ups.
- Different levels of security can be selected: lock the hard drive, erase the hard drive or both.
- Can be installed directly from CD to the beginning of the HDD for quick data protection.
- User can determine when the erasure will be executed.
- Support of ATA security set (hard drive lock).

1. Safeguarding data during logistics; securing for shipping & returns
2. IT support functions can safeguard data when temporarily storing or maintaining a customer's PC
3. User can protect sensitive data when exposed to a theft risk e.g. travelling with a laptop
4. Onsite use at end-of-life to activate safeguard before sending to a recycler or service partner for reuse preparation
